## **EXECUTIVE SUMMARY**

The Washington State Speed Report is primarily intended to provide reliable data to be used in highway design, speed trend analysis, and collision analysis, as it relates to speeds. The collection method records all vehicles passing over the loop detectors for vehicle volume, classification and speeds. Speed data is collected and reported in five mile per hour increments.

This report is based upon the speed data collected for the *Fourth Quarter* 2008, October 1<sup>st</sup> through December 31<sup>st</sup>.

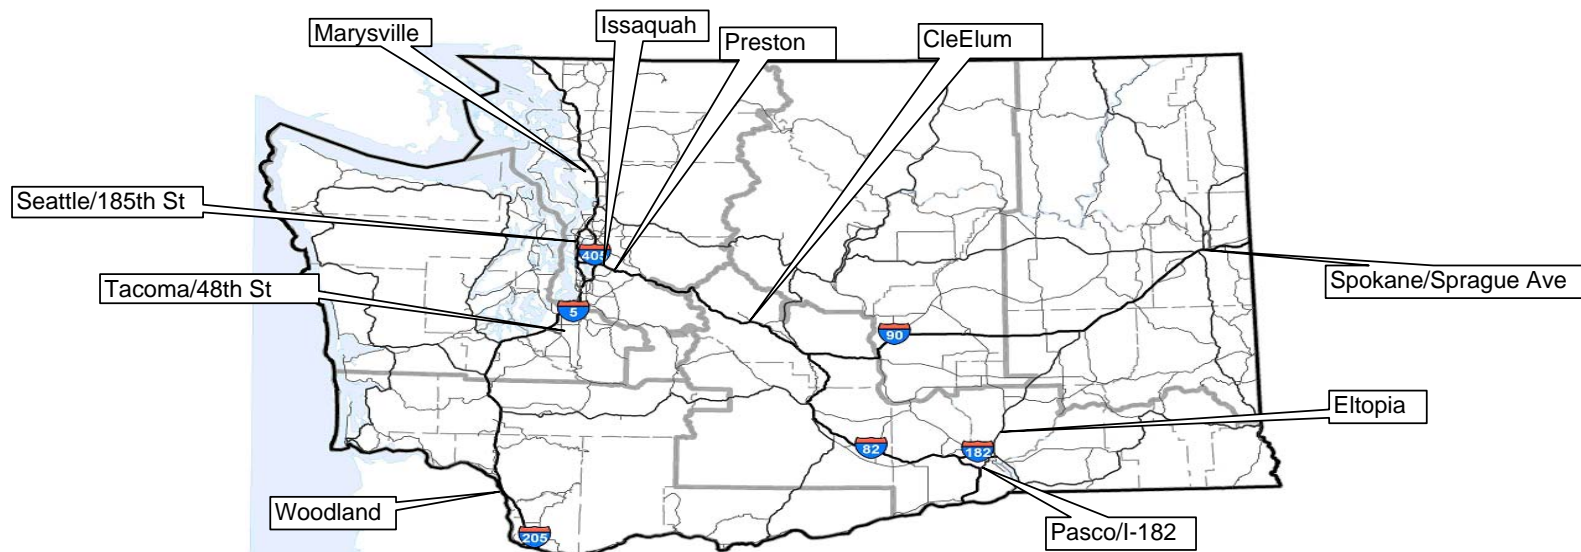

Speed trends are remaining relatively consistent on all highways combined. Comparing the *Fourth* quarters of 2006 and 2007 to this quarter of 2008, the average speed and 85<sup>th</sup> percentile (definition in Glossary, last page) have remained relatively the same. On all highways the percent of vehicles traveling greater than the posted speed limit has declined.

If there are questions regarding this report or requesting special speed studies from the Transportation Data Office. Please contact the Automated Data Collection Section at (360) 570-2392, (360)570-2394 or E-mailing [tdoadc@wsdot.wa.gov](mailto:tdoadc@wsdot.wa.gov)

## **Detailed Summary**

This report is based upon the speed data collected for the *Fourth Quarter* 2008, October 1<sup>st</sup> through December 31<sup>st</sup>.

The report reflects 47 permanent traffic recorder site reporting locations, throughout the state. This quarter only 43 of the 47 speed sites collected & reported data. Currently, the Speed Report is for quarterly data only.

Speed trends are remaining relatively consistent; 21% – 59.5 % of the vehicles observed were at or above the posted speed, on all highways combined. Comparing the *Fourth* quarters of 2006 and 2007 to this quarter of 2008, the average speed and 85<sup>th</sup> percentile (definition in Glossary, last page) have remained relatively the same.

When comparing state averages, some individual PTR/WIM (Permanent Traffic Recorder/Weigh-In-Motion) sites tend to have higher percentages of vehicles traveling faster than the posted speed. For example; the PTR near Lacey on I-5 recorded 77.4% of the vehicles at or above the posted speed. And 33% of the vehicles were traveling at least 5 mph or greater than the posted speed. The Average Speed at this location was 2.71 mph above the posted speed and the 85<sup>th</sup> percentile was 8.7 mph above.

The site with the highest vehicle count at and above 90 mph was Preston. The site recorded 6,666 vehicles exceeding 90 mph, daily average of 73 vehicles. Although, the 6,666 vehicles is only 0.16% of the total vehicles observed, 16 of every 10,000 vehicles during the three-month period. There is no dominant trend as to what time of day the higher speeds occur, although, the eastbound direction reflects 61% of the speeding vehicles and westbound is 39%.

The loss of comparative data due to construction activities affected several automatic traffic recording sites. Data loss from recorders is listed in “Detailed Summary”; the loss may be for a partial quarter, one direction or both directions of travel at a particular location. The month of December’s inclement weather affected most of the PTR locations in Washington State, causing a slight decrease in volumes and speeds.

Please note; the current collection systems used at PTR/WIM locations reflect all vehicle types observed. Emergency and enforcement vehicles may influence the statistic being reported, especially in the locations with the highest volume of vehicles traveling greater than 90 miles per hour as reported in the Top Ten Section of this report.

In comparing the *Fourth* quarters from 2006 & 2007 to 2008, the average speeds have remained relatively the same or only slight changes.

The 85<sup>th</sup> Percentile is above the posted speed during all quarters but has remained the same for all highways. A decline is present in “*Percent of Vehicles At & Above Posted Speed Limit*” for the Fourth quarter.

**Special Note:** Volumes of vehicles change quarter to quarter due to sites not collecting caused by construction, equipment failure and weather related conditions. Individual sites may vary from state averages due to these same types of problems. The current collection system reports all vehicles observed, including emergency and enforcement vehicles which can influence the data. All speed data is represented by main line traffic, ramps are not included.
